

BIN-DUMPER

Series TF7400

The Edwards Bin Dumper is a hydraulically actuated clamp and rotating carriage designed for use on Edwards fork lifts and loader forks. It can be assembled for either right hand or left hand dumping.

A time saving convenience is the hydraulic hold down clamp that retracts to a backstop position for handling stacked bins. An automatic safety lock prevents rotation when the clamp is in the backstop position.

Simplicity of design coupled with high quality material and workmanship assure efficient operation and years of dependable service.

Models also available for industrial I. T. A. lift trucks.
